PROFESSIONAL SUMMARY

Information and Communication Technologies engineer (Yachay Tech) with hands-on experience in data science, machine learning, and LLM-based automation. Has built end-to-end RAG pipelines, multi-step AI agents, and prediction APIs, along with workflow automation (n8n) and Excel/VBA macros for administrative and accounting processes. Seeking to contribute to Data, Automation, or Applied AI roles.

EDUCATION

B.Eng. in Information and Communication Technologies — Yachay Tech University, Imbabura, Ecuador

Expected December 2026

Technical High School Diploma — Unidad Educativa Francisco de Orellana, Orellana, Ecuador

- Flag Bearer (Abanderado del Plantel)
- Award for Best Graduating Student

EXPERIENCE

Teaching Assistant — Machine Learning — Yachay Tech University

Sep 2025 – Nov 2025

- Supported course instruction on Machine Learning concepts, including student Q&A and exercise review.

Undergraduate Community Service Intern — Connect YT Project — Graduate Studies Office, Yachay Tech University

Jun 2024 – Jul 2024

- Developed backend modules (Node.js, Express) and frontend components (Angular) with CRUD operations for admissions, master's programs, and contact management.
- Designed and implemented the PostgreSQL database and connected it to the backend via the 'pg' package, including endpoint testing with Postman.

Independent / Freelance — Technical Support & Automation — Remote

Ongoing

- Built Excel systems with VBA macros for accounting departments, including a full bookkeeping system for a hostel.
- Provided remote PC maintenance and software cleanup services, as well as financial email account recovery.

Finance Assistant — Empresa Petrolera 4L — Finance Department, Orellana, Ecuador

2021 – 2022

- Supported administrative and reconciliation tasks within the finance department.

PORTFOLIO PROJECTS

Bank Deposit Subscription Prediction API — Personal project — Python, FastAPI, CatBoost, scikit-learn

- Built a REST API with FastAPI serving a binary classification model (CatBoost), with an integrated web interface for real-time testing.
- Designed relative path handling for portability and deployment on Uvicorn/Procfile-based platforms.

Consulta Galápagos — RAG Telegram Chatbot — Personal project — n8n, Supabase (pgvector), Cohere, Google Gemini, Docker

- Replicated and evolved an academic RAG paper, migrating from a fixed-retrieval pattern to an AI Agent + Tool architecture after diagnosing an n8n self-hosted integration bug.
- Implemented a document ingestion pipeline (chunking, multilingual embeddings) and a live conversational flow via Telegram backed by a Supabase vector store.

Multi-Agent Research Assistant (LangGraph) — Collaborative project — Python, LangGraph, Gemini, Tavily, Pydantic

- Designed a stateful graph with conditional logic (Research → Analyst → Writer) that autonomously decides whether to loop back for more research or generate the final report.
- Applied Pydantic structured outputs to ensure consistent decisions from the evaluating agent.

CV Processing Automation — Collaborative project — n8n, Gmail API, Dropbox API, DeepSeek, Supabase

- Automated intake, extraction, classification (junior/semi-senior/senior), and structured storage of CVs received by email, with automatic recruiter notifications.

- Resolved cross-node context loss and batch-execution issues in n8n through workflow architecture adjustments.

Telecom Churn Prediction — Undergraduate Thesis — Yachay Tech University — CrewAI, GPT-4o-mini, DeepSeek, LaTeX

- Compared four LLM-agent autonomy configurations (from human-led baseline to fully autonomous pipeline) for churn prediction.

CompararProcesoVsTunel — VBA Automation — Production environment — Excel VBA

- Developed a macro for a seafood processing plant that compares data across sheets with dynamic column detection, tolerance handling, and discrepancy summaries.

TECHNICAL SKILLS

Languages & Libraries: Python, SQL, pandas, scikit-learn, CatBoost, VBA

AI / LLM: LangGraph, CrewAI, RAG, Prompt Engineering, OpenAI, Google Gemini, DeepSeek, Cohere

Backend / Infrastructure: FastAPI, Node.js, Express, Docker, n8n, Git

Databases: PostgreSQL, Supabase, pgvector

Frontend: Angular, HTML, CSS, JavaScript

Office Automation: Advanced Excel, VBA Macros

COURSES & CERTIFICATIONS

Introduction to Deep Learning with PyTorch

Image Processing in Python

Advanced Search and Innovative Research

Monetizing Artificial Intelligence

LANGUAGES

Spanish — Native | English — Intermediate (B1, improving)
